

Panasonic Alarm Manager - PAM

Purpose

Primary objective of PAM is to integrate and bring together multiple systems to work harmoniously to open closed CCTV system.

PAM receives alarms & events from multiple systems simultaneously and take multiple actions at CCTV and other systems. It also provides configuration to link multiple causes and effects.

It is basically a bridging tool among multiple systems, so they can work together with CCTV and visa versa.

Benefit

- PAM is local (EU) to your business need
- It can provide unique solution for your project
- Quick win for a project

Main Features

- Plug-n-Play to other systems (where possible)
- Exchange device configuration information
- Receives Events from other systems
- Take user customized actions
- Automatic popup at client(s) if PAM disconnects for any reason.
